Re: 3905 Page Road Industrial Trip Generation
Durham, NC

This memorandum provides an assessment of the trip generation (site generated traffic volumes) for a proposed industrial development at 3905 Page Road in Durham, NC.

Project Background

The development at 3905 Page Road is located at the intersection of Page Road (SR 1973) and Airport Road (SR 1971), with frontage along both roadways. A concept plan is shown in Figure 1 below. Although the specific tenant has not been identified, the development is planned to be a single industrial building for light industrial use. The total building square footage in this concept plan is 132,080 sf; however, the analysis assumes up to 150,000 sf to provide a conservative buffer for minor changes to the building. Access to the proposal site is currently being reviewed; however, it will include driveway connections to Page Road along its western frontage and Airport Road along its eastern frontage.

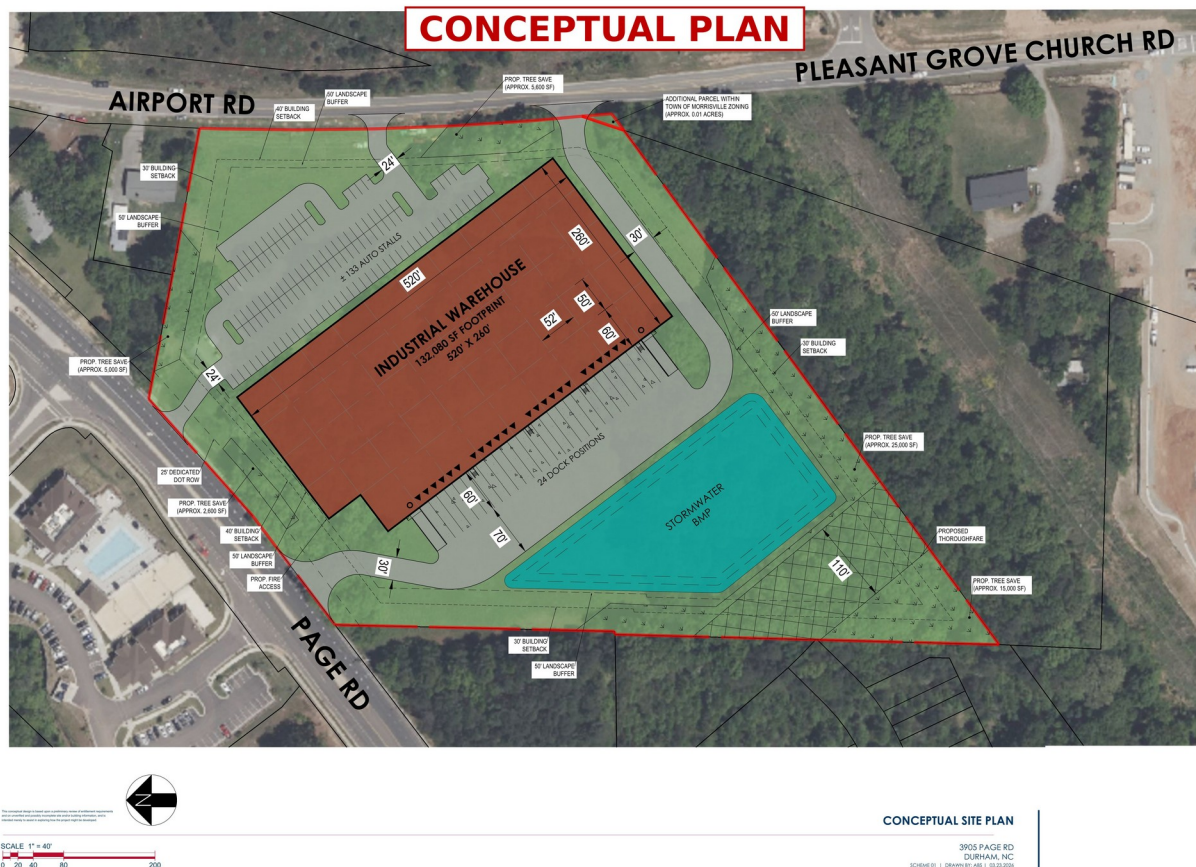

Figure 1: Concept Plan

Trip Generation

Trip generation estimates were prepared using the *Institute of Transportation Engineers (ITE) Trip Generation Manual, 12th Edition*. ITE Land Use Code (LUC) 110 (Light Industrial) was applied to reflect the anticipated use of the site. The resulting daily and peak-hour trips for the development are summarized in [Table 1](#) below.

Table 1: Trip Generation - 3905 Page Road Development in Durham, NC

LUC ¹	Land Use	Unit	ADT	AM Peak Hour			PM Peak Hour		
				Enter	Exit	Total	Enter	Exit	Total
Total Site Trips									
110	Light Industrial	150,000 sf	540	62	10	72	18	56	74

Notes:

1. Land Use Code and trip generation rates are determined based on *ITE Trip Generation, 12th Edition*

Conclusion

Per Section 3.3 of the City of Durham Unified Development Ordinance (UDO), a Traffic Impact Analysis (TIA) is required for developments anticipated to generate 150 or more vehicle trips during a peak hour. As shown in [Table 1](#), the proposed development is anticipated to generate 72 trips during the weekday AM peak hour and 74 trips during the weekday PM peak hour; therefore, a TIA is not required for the 3905 Page Road development. In addition, the total site trip generation of 540 daily trips is well below the NCDOT TIA threshold of 3,000 daily trips.
